RETROFIT YOUR SHOWER.

If your shower can fill a bucket in 60 seconds it is using more water than you need for a great shower.

Think about installing a low-flow shower head or a flow restrictor.

Get yours from a plumbing store – make sure you match it with your home's water pressure (check your cylinder or ask a plumber).

RETROFIT YOUR TOILET.

Modern toilets are more efficient than older toilets. Ceramic cisterns often have a date stamped on the inside of the back wall.

> If you have an older toilet (pre 2005) you can install a weighted flush limiter ("Gizmo"), giving you control of how much water is used each flush.

Available FREE from your local council office. While stocks last.

Stand a plastic soft drink bottle in your cistern to save water every time you flush.

Install a ballcock that allows adjustment of the litres used per flush. A ballcock is a mechanism in the cistern made up of a valve and floating ball.

Available from your local plumbing store.

SMART WATER WASHING MACHINE USE.

Behaviour is the best retrofit option for saving water with your washing machine.

- Wait until you have a full load before washing.
- Use the eco cycle on your machine if it has one.

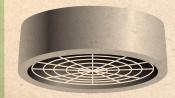

• Select a low water level for smaller washes. These actions will save water and electricity.

THANKS TO ECO MATTERS TRUST FOR THEIR CONTRIBUTION.

RETROFIT YOUR TAP.

If you have a mains pressure system you can add a tap aerator to limit your water flow while still getting good pressure. Aerators are great for hand basins and sinks that you don't often fill with water.

Get yours from a plumbing store – make sure you match it with your home's water pressure (check your cylinder or ask a plumber).

AN AERATOR IS A SMALL DISK THAT ALLOWS AIR TO MIX WITH THE WATER.
