

## Appendix N4 - Protected Trees

The Standard Tree Evaluation Method (STEM) for the assessment of trees has been adopted. This method attributes a value (points score) to the tree based on an assessment of the following categories:

1. Condition Evaluation comprising Form, Occurrence, Vigor and Vitality, Function and Age;
2. Amenity Evaluation comprising Stature, Visibility, Proximity, Role and Climate; and
3. Notable Evaluation comprising Stature, Historic association and Scientific value.

The threshold for determining if trees will be classed as protected trees in the District Plan is a minimum of 110<sup>1</sup> ~~120~~ STEM points. There is a higher threshold for trees that will require notification when an application is received to remove a tree with more than 138 STEM points. These trees have some outstanding features that contribute to the amenity and/or heritage of the community and make a positive impact on the district. In addition to meeting the threshold the tree needs to appear healthy and structurally sound and not be of a weed species.
